Abstract: In present days most of the TV serials, Dance competition programs, Singing Competition Programs will be telecasted to increase their respective channel TRP's. In today's Reality shows are really hitting up the mark and it has also been become a great business. People are more interested in reality shows and also in the new talented people who star in dance, singing, dramas competitions etc. Hence this encourages the talent search programs in various parts and places. So, people travel miles just to give an audition for these kinds of programs. These programs could be a breaking point in someone's life and also can change their life forever. But there are situations when the people with real pure talent are missed out, in other words, people may lose their valuable opportunity. More over most of the people complaint about the means of transports. So, with these problems in hand most of the rural people lose their chance which could change their lives. So, by providing such chances through online can not only can we change people's life but we could also help them to peruse their Dream goals and ambitions. So, we decided to help and support such people who cannot participate in a live audition which might be held in a further distance from the Contestant. We gathered up information from various of people who missed several Audition and we found out similar reasons from the Contestants. Some of the Reasons was Transport problems, Stage Fear, lack of lodging facilities also some were nervous seeing the vast number of Contestants in the Trails. And nowadays people are scared to come outside due to pandemic situation like covid and for auditions people come from different places, so we can't do offline auditions like these situations

Keywords: Auditions, contestants, online, Offline.

I. INTRODUCTION

The main objective of the project is to develop a website where the contestants to upload their videos anytime and also which can reduce a lot of human effort in conducting an Offline Audition in a large scale. To overcome from this problem, we thought of an idea which can solve some of the problems related to this Situations like Transport problems, Stage Fear, lack of lodging facilities also some were nervous seeing the vast number of Contestants in the Trails. This project provides an environment where the Contestants can give Auditions from their current place. Not only they can give Auditions online but they can also view the Results through Online. So, this Project can be a major step in someone's Life. This project can also be a solution to the Organizing committee as it reduces a lot of human work and Effort. In this project we give an option to the Contestants to upload a video of them performing their talent. Now this video is filtered based on the Different Genres and Styles. These Videos are Filtered and viewed by the Respective Judges. The judges verify these videos and then select these contestants.

The results are E-mailed to the Contestants. So, this was a brief Introduction to this Project.

II. RELATED WORK

To understand the impact of the democratization of the audition procedure and the screen, we must first explain how orchestra auditions are now conducted. After determining that an audition must be held to fill an opening, the orchestra advertises that it will hold an audition [1]. A better understanding of how auditioning dancers experience anxiety and associated image content can help train dancers preparing for anxiety-provoking, high-stakes performances [2].

III. METHODOLOGY

DETAILED DESIGN: In this detailed design we shall understand the main aspects of the projects and the various modules included in the project. A good system design can be a key to a good project development. So, by dividing the entire project into various modules and sub-modules we can do the project in a quicker way and in a efficient. We have divided the entire project into 4 modules.

Now let us briefly look at these modules.

1.ADMIN MODULE: The admin module is the key module of the project. It has the authority over all the other modules. This module oversees other modules. The admin will have his own precise username and a password to login into the admin page. The admin can make any kind of favourable changes required for the other modules. The Admin has the following functionalities and can perform such actions and events.

- ADD JUDGE.
- JUDGES.
- REGISTERED CONTESTANTS.
- SELECTED CONTESTANTS.
- WAITING LIST.
- VIEW FEEDBACK.
- LOGOUT.

2.JUDGE MODULE: In this the judge will have to login into the login page with a unique username and password which is given by the admin to each judge. Once the judge has logged into the page, he/her can view the contestant's videos based on the genre and can select or disqualify the contestants based on their performance and talent. After watching the video, the judge can give feedback to the contestant based on their performance. So, by this the judge can login from anywhere he wants and can judge rather than being physically present in one particular place. Now the judge page has the following options through which the judge can perform many operations.

- VIEW JUDGE.
- SELECT CONTESTANTS.
- VIEW WAITING LIST CONTESTANTS.
- VIEW FEEDBACK.
- LOGOUT

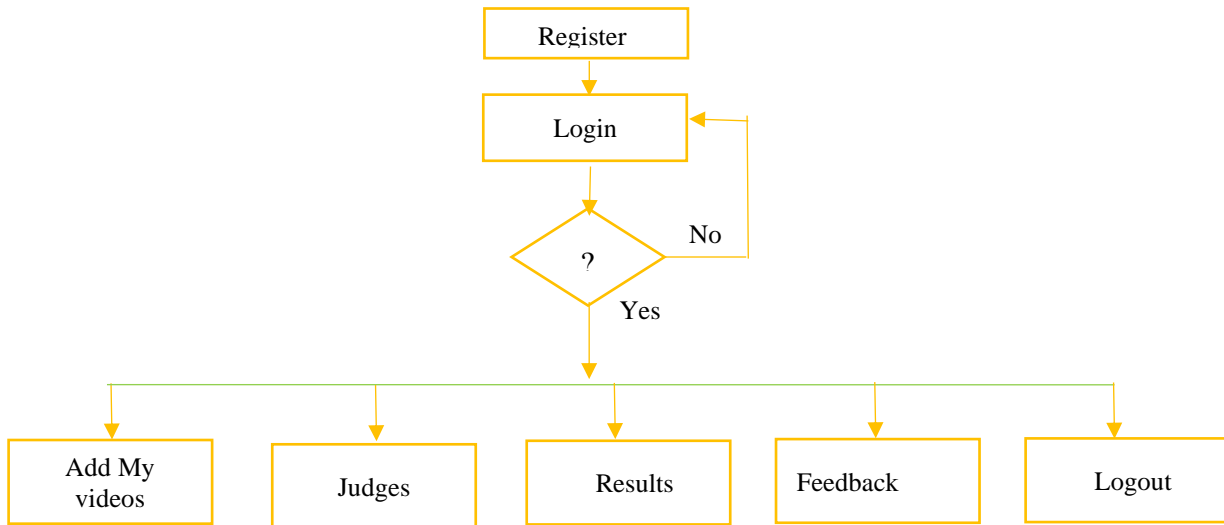

3.CONTESTANT MODULE: The contestant module is where the contestants can login into the contestant page using the his/her username and password. If the contestant is new the contestants have to freshly register into the page. While registering the contestants have to provide Name, Username, Password, email, Address, gender (male, female and others), the type or the genre of music (like Hindustani, Karnatic, western, classical, folk), mobile number. Once the details are given a confirmatory OTP will be sent to the contestant email id for spam verification. The contestant has to upload his/her video singing as instructed by the organization and the contestant also has to mention the type of genre of music to which they are uploading their videos. Once the judges have given the results the contestants will receive the final verdict by the judges whether they are selected or disqualified by the judges both in email and in the website too. So by this the contestants upload the video wherever they are without actually being physical present or arriving at a particular designated Arena.

- ADD MY VIDEO.
- JUDGES.
- RESULTS.
- FEEDBACK.
- LOGOUT.

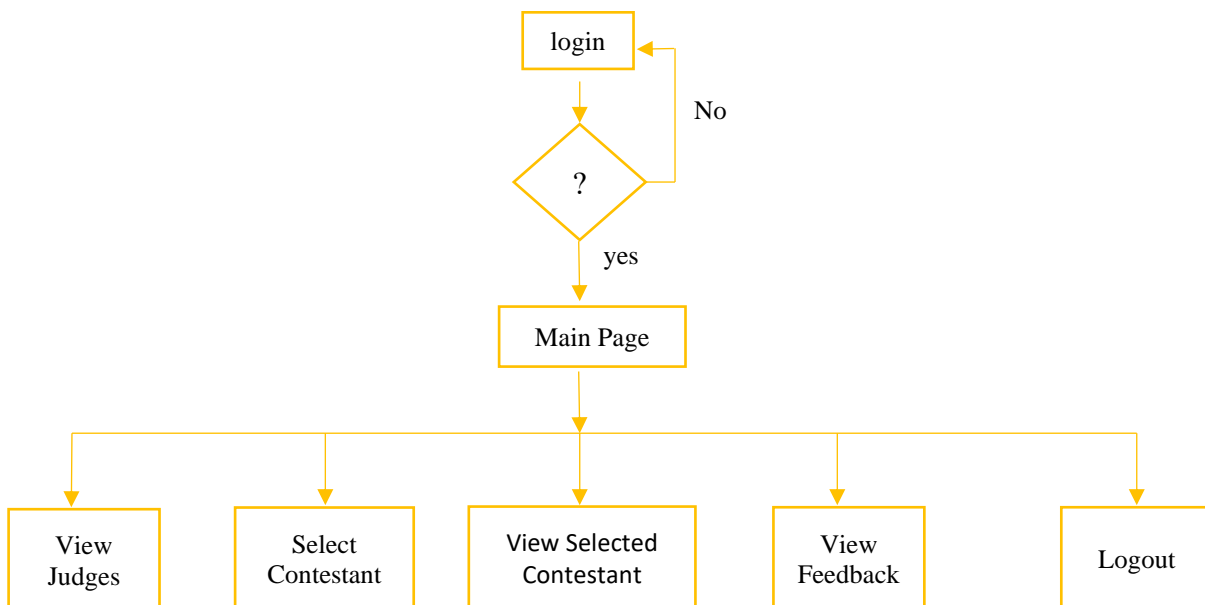

4.CONTACT US MODULE: It's a special page for the organization where the organization can post their advertisements, their sponsors and also a helpline and the address and details of the organization where they can solve the problems of the contestants applying for the competition.

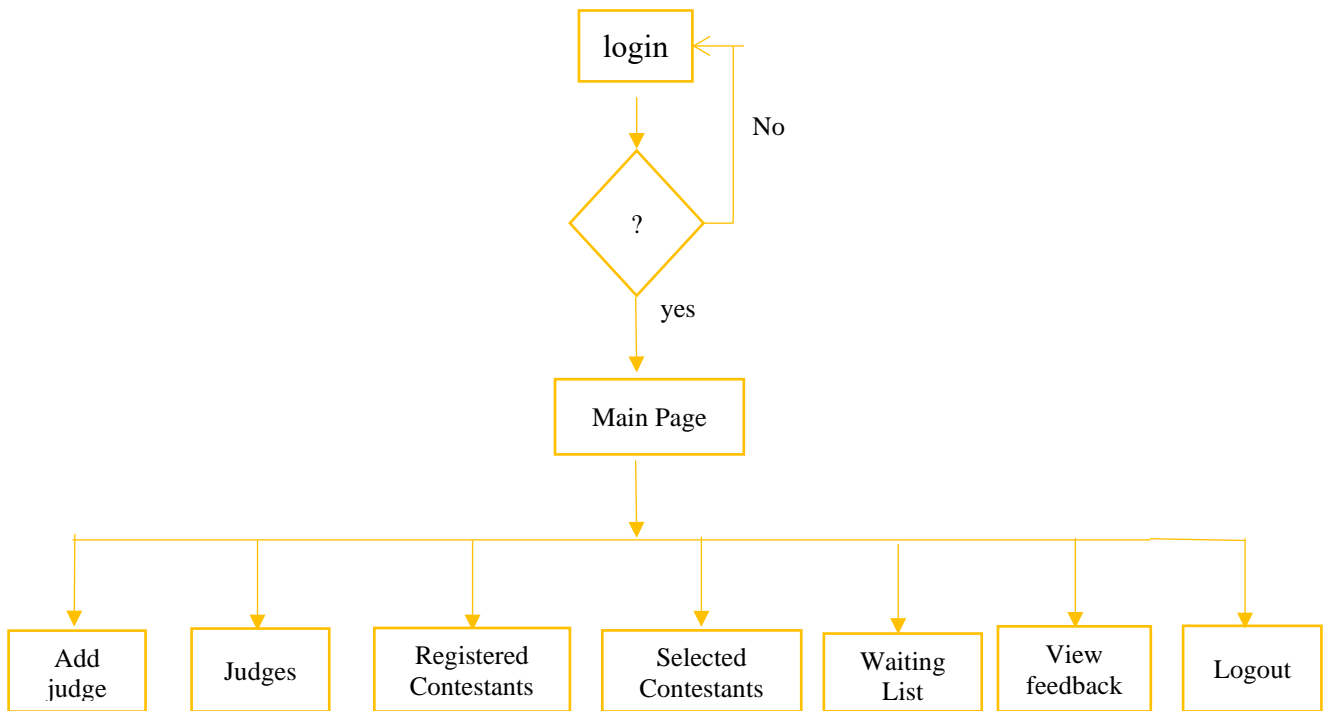

IV. ER-DIAGRAM

CONTESTANT MODULE:

JUDGE MODULE:

ADMIN MODULE:**V. FUTURE ENHANCEMENT**

DETECTING THE ILLEGAL ENTRY OF THE CONTESTANT: By advance coding we might be able to detect the contestants who are logged in twice by the help of the Gmail and phone number. We might also be able to block these kinds of contestants.

ONLINE PAYMENT OPTION: By displaying the QR code of the organizations bank, the contestants can be able to pay the audition fees using online banking and net-banking facilities and might be also be able to get a confirmatory E-mail regarding the fulfilment of the payment.

DETECTING AUTO-TUNING: When the contestant uploads the video the System might be able to analyse and detect weather the voice of the contestant is a natural or a auto tuned voice.

VI. CONCLUSION

To conclude, by using this system, we can reduce time, cost and we can produce the result more quickly and we can deliver the result swiftly to all the contestants who are registered in the competition. Through this project the Auditions can be made a lot easier, less-expensive, Productive and Successful. We can help a lot of young talented people out there who really want to express their talent and might also help them to build their career. It is easier for the judges to select the candidates online and can announce the result on spot. So, many people can take part in this audition from their current place. By implementing this System, the Audition Management Team can reach many places in short time with less Expense and in less time too. So, in conclusion the system is easy and efficient to the Organizers, the judges and also to the candidates who will apply for the Auditions
